ADDRESS

Gates Computer Science 254,
Stanford University,
Stanford, CA 94305.

Education

University of California, Berkeley Doctor of Philosophy in Computer Science Advised by Michael I. Jordan and Martin J. Wainwright	2011 - 2016
University of California, Berkeley Master of Arts in Statistics	2011 - 2013
Tsinghua University Bachelor of Engineering in Computer Science Supervised by Andrew C. Yao	2007 - 2011

Employment

Post-doc Researcher at Stanford University Hosted by Percy Liang and Moses Charikar	2016 - Now
Intern at Baidu Project: burst detection in web search	Winter, 2015
Intern at Microsoft Research Redmond Project: convex optimization	Summer, 2014
Intern at Google Mountain View Project: personalized recommender systems	Summer, 2013
Intern at Microsoft Research Asia Project: click modeling for web search and online advertising	2010 - 2011

Selected Awards & Honors

2017	Best Paper Award, Conference on Learning Theory (COLT).
2016	Outstanding Reviewer Award, International Conference on Machine Learning (ICML).
2015	Baidu Fellowship (awards 8 PhD students every year worldwide).
2013	Microsoft Research PhD Fellowship Finalist.
2011	Outstanding Undergraduate Dissertation Award, Tsinghua University.
2006	Silver Medal in Asian Physics Olympiad.
2006	Gold Medal in Chinese Physics Olympiad (5 th among 400,000 participants).

Research Projects

My research explores the frontiers of Artificial Intelligence by developing algorithms, building systems and proposing fundamental theory. Below is a list of projects that I have been working on (with publication references):

Natural language processing

- Semantic parsing for question answering systems [C1].
 - New efficient algorithm for parsing natural language into logical forms.
 - 11x-16x faster and 13% more accurate than state-of-the-art.

Machine learning and optimization

- Deep learning and non-convex optimization [C2,C3,C4,C5,C6].
 - Algorithms for non-convex optimization (with applications to deep learning).
 - Stronger optimality guarantees; improved empirical performance on DNN/CNN/LSTM.
- Convex optimization [J1,C9].
 - Algorithm for convex optimization.
 - Superior efficiency: orders-of-magnitude faster than SGD in theory and in practice.
- Crowdsourcing [J4,C10].
 - Algorithm for estimating true labels from noisy crowdsourced data.
 - Optimality guarantee: first algorithm to achieve the best possible statistical rate.
- Personalized recommender systems [C12].
 - Non-parametric language model for characterizing very sparse user-item relations.
 - Improved the quality of online-shopping recommendation.
- Click modeling for web search [C16,C17,C18,C19,C20,C21]
 - Data mining from the massive search click log.
 - Improved Microsoft Bing’s ranking quality (NDCG metric) by $\sim 1\%$.

Distributed computing

- Distributed algorithms for machine learning [J5,J6,C7,C8,C14,C15].
 - Communication-efficient algorithms for distributed machine learning on big clusters.
 - Optimal guarantee: best possible accuracy, least possible computation and communication.
- Fundamental theory of distributed computing [C11,C13,M2].
 - Understanding the fundamental trade-offs between communication, computation and statistical accuracy for an arbitrary distributed system.
- Programming interface for parallelizing stochastic algorithms [M1].
 - A user-friendly framework for implementing parallel online algorithms on Spark.
 - Open source project: received 80+ Github stars.

Other projects

- Theoretical statistics [J2,J3].
- Theoretical computer science [J7,C22].

Teaching

Graduate Student Instructor, Introduction to machine learning, UC Berkeley

Spring, 2015

Graduate Student Instructor, Randomized algorithms for matrices and data, UC Berkeley

Fall, 2013

Service

Journal Reviewer: Journal of Machine Learning Research, Annals of Statistics, Mathematical Programming, ACM Transactions on the Web.

Conference Reviewer: ICML (2013 -), NIPS (2013 -), AISTAT (2015 -), IJCAI (2015 -).

Programming

Capable of Python, C/C++, C#, Java, Scala, MATLAB.
